REVIEWER INDEX

to Volume 128, May–August, 1991

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 128. The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant, making sure the presentation is accurate, unambiguous and easily readable. For this, we depend heavily on our reviewers, who perform this indispensable service without reward. The quality of the journal strongly reflects the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

SUBJECT INDEX

to Volume 128, May–August 1991

Aggregation, founding of, effect of genes, *Polysphondylium pallidum*, 563
Allele
  δ insertion, histone regulatory mutations, yeast, 729
  estimation of effective number, coyote mitochondrial DNA genotype frequencies, 405
  inheritance, sex-specific differences, interspecific backcross mice, 813
  spontaneous germinal activation, quiescent *Uq* transposeable elements, maize, 823
Apis mellifera, 393
Aporepressors, mutant tryptophan, altered specificities, copressor recognition, 29
Arginine, regulation of biosynthesis, control of gene expression, 489

Bacillus subtilis, DNA repair, evolution of transformation, 215
Bacteriophage λ, heteroduplex chain polarity in recombination, 7
Bacteriophage ΦX174, cold-sensitive prohead accessory protein, second-site suppressors, 663
Bacteriophage T4
  DNA polymerase, mutational analysis, mRNA operator, 203
  marker-dependent recombination, 673
Bats, length and sequence variation, D-loop mtDNA, 607
Bayes' theorem, three-locus linkage analysis, recombinant inbred strains, mouse, 631
Body size, genetic variance, natural population, *Drosophila buzzatii*, 739
Bombyx mori, early chorion multigene family, localized gene conversion, 595

Caenorhabditis elegans, 251, 269, 281
Calmodulin, cytochrome oxidase II and, molecular evolution, *Caenorhabditis*, 269
Cell cycle, flagellar function and, *FLA10* locus, *Chlamydomonas reinhardtii*, 549
Chloroplasts, comparative effects of pollen and seed migration, cytonuclear structure, plant populations, 639
Chromosome
  differentiation and pairing behavior, polyploids, *Secale*, 433
  early steps of meiotic recombination, isolation of mutants, yeast, 79
  estimation of genome length, maximum likelihood method, 175
  120-kilobase mitochondrial, maize, 417
  modifiers of position-effect variegation, heterochromatic genes, *Drosophila melanogaster*, 785
  Ngbo locus, genetic control of pheromones, *Drosophila simulans*, 293
  region 63, genetic analysis, *Drosophila melanogster*, 763
Chromosome *III*, meiotic recombination hotspot on, *Saccharomyces cerevisiae*, 717
Circadian rhythms, mutational analysis, Drosophila *miniature-dusky* locus, 571
Coprinus cinereus, mating type A factor, molecular analysis, 529
Coyote, mitochondrial DNA genotype frequencies, effective number of alleles, 405
Crassostrea gigas, 133
Crossing over, homologous, requirements of, humans, 143
Cysteine, tester system for detecting each of six base-pair substitutions, iso-1-cytochrome *c*, 59
Cytochrome oxidase II, calmodulin sequences and, molecular evolution, *Caenorhabditis*, 269
Cytoplasm, nuclear mutation reversing a biased transmission, yeast mitochondrial DNA, 241

Deletions
  IS*10*, low frequency, *Escherichia coli*, 37
  two independently derived *waxy* mutations, maize, 425
Disequilibrium, comparative effects of pollen and seed migration, cytonuclear structure, plant populations, 639
DNA
  binding motif and combinatorial mutagenesis, Tn*10* Tet repressor binding, *Escherichia coli*, 225
  engrailed regulatory, mediation of transvection of *white* gene, *Drosophila*, 751
  molecular structure of *TE146* and derivatives, *Drosophila melanogaster*, 357
  rejoining of donor molecule, IS*10* transposition, 687
  repair and evolution of transformation, *Bacillus subtilis*, 215
  sequence samples, genealogies and distribution of fixed differences, DNA sequence samples, 831
  specific alterations, environmental induction of heritable changes, flax, 619
DNA, complementary, characterization of *prune* locus, *Drosophila melanogaster*, 373
DNA, mitochondrial
  D-loop, length and sequence variation, evening bat, 607
  genotype frequencies in coyote, effective number of alleles, 405
  intergenic region between COI and COII, origin and function, honeybees, 393

molecular evolution, cytochrome oxidase II and calmodulin sequences, *Caenorhabditis*, 269
yeast, nuclear mutation reversing a biased transmission, 241
DNA polymerase, bacteriophage T4, mutational analysis, mRNA operator, 203
DNA topoisomerase II, genetic analysis of gyrase A-like domain, *Saccharomyces cerevisiae*, 703
Douglas-Hawthorne model, paradigm, cellular regulatory mechanisms, fungi, 195
Drosophila, 311, 751, 777
Drosophila buzzatii, 739
Drosophila melanogaster, 89, 103, 119, 303, 339, 357, 373, 381, 471, 571, 583, 763, 785
Drosophila novamexicana, 331
Drosophila simulans, 293
Drosophila virilis, 331

Electrophoresis, development of evolutionary genetics, 657
Environment, induction of heritable changes, specific DNA alterations, flax, 619
Escherichia coli, 23, 29, 37, 45, 225, 687, 695
Evolution
electrophoresis, 657
molecular, cytochrome oxidase II and calmodulin sequences, *Caenorhabditis*, 269
molecular analysis, *Coprinus cinereus* mating type A factor, 529
nearly neutral mutation model, finite populations, 183
transformation, DNA repair, *Bacillus subtilis*, 215
transposeable element *mariner*, *Drosophila* species, 319

Fitness, overcompensation and overdominance, *Drosophila melanogaster*, 381
Flagellar assembly, cell cycle and, *FLA10* locus, *Chlamydomonas reinhardtii*, 549
Flax, environmental induction of heritable changes, specific DNA alterations, 619
Fungi, cellular regulatory mechanisms, impact, Douglas-Hawthorne model, 195
Fungus, heterothallic, cloning of mating types, 539

Galactose
cellular regulatory mechanisms of fungi, impact, Douglas-Hawthorne model, 195
mechanism of inducer formation, *gal3* mutants, yeast, 233
Gene
chorion, localized conversion, *Bombyx mori*, 595
essential zygotic, genetic mosaic screen, *Caenorhabditis elegans*, 281
heterochromatic, modifiers of position-effect variegation, *Drosophila melanogaster*, 785
let-23, multiple functions, vulval induction in *Caenorhabditis elegans*, 251
Posterior sex combs/Suppressor 2 of zeste, molecular genetics, *Drosophila melanogaster*, 119
SNF2/SNF5/SNF6, Ty transcription, yeast, 69
snf3, restoration of glucose transport, dominant and recessive suppressors, 505
SUP1(SUP45) and *SUP2(SUP35)*, interaction, non-Mendelian factors in yeast, 513
white, fragment of *engrailed* regulatory DNA, transvection in *Drosophila*, 751
Genome, length, estimation of, maximum likelihood method, 175
Glucose
phosphorylation, invertase expression, yeast null mutants, 521
restoration of transport, dominant and recessive suppressors, yeast *snf3* mutants, 505
Gyrase A, -like domain, DNA topoisomerase II, yeast, 703

Haldane's rule, causes of sex ratio bias, unisexual sterility, hybrids, 841
Hemoglobin, homology requirements, unequal crossing over, humans, 143
Heterochromatin
ABO, rescue from *abnormal oocyte* maternal effect, *Drosophila melanogaster*, 583
independent distorting ability, *Enhancer of segregation distortion*, *Drosophila melanogaster*, 339
l(3)S12 locus of *Drosophila melanogaster*, stage-specific misexpression, *P* element transposons, 103
modifiers of position-effect variegation, *Drosophila melanogaster*, 785
Heteroplasmy, nuclear mutation reversing a biased transmission, yeast mitochondrial DNA, 241
Hexokinases, glucose phosphorylation, invertase expression, yeast null mutants, 521
Histone, regulatory mutations, suppression of δ insertion alleles, yeast, 729
Honeybees, origin and function, intergenic region between COI and COII, 393
Humans, homology requirements, unequal crossing over, 143
Hybrid dysgenesis, P-M, models, repression of transposition, 471
Hybrids, causes of sex ratio bias, unisexual sterility, 841

Invertase, expression, glucose phosphorylation, yeast null mutants, 521
IS*10*, promotion of adjacent deletions, low frequency, *Escherichia coli*, 37
Iso-1-cytochrome *c*, tester system for detecting each of six base-pair substitutions, essential cysteine, yeast, 59

Linkage, estimation of genome length, maximum likelihood method, 175
Locus
FLA10, cell cycle and flagellar function, *Chlamydomonas reinhardtii*, 549

l(3)S12, heterochromatic position effects, *P* element transposons in *Drosophila melanogaster*, 103
miniature-dusky, mutational analysis, *Drosophila melanogaster*, 571
phosphoglucomutase-2, expression of overdominance, oyster, 133
prune, characterization, *Drosophila melanogaster*, 373
three-locus modifier model, gametophytic self-incompatibility, 453
waxy, common deletion, maize, 425
Lycopersicon esculentum, 1

Maize
common deletion, two independently derived *waxy* mutations, 425
120-kilobase mitochondrial chromosome, 417
P locus, *Ac*-induced homologous recombination, 163
quiescent *Uq* transposeable elements, spontaneous germinal activation, 823
Maternal effect, *abnormal oocyte*, rescue from lethality by *ABO* heterochromatin, *Drosophila melanogaster*, 583
Mathematical models, repression of transposition, P-M hybrid dysgenesis, P cytotype, 471
Mating
cloning of types, haploid transformants, *Podospora anserina*, 539
type A factor, molecular analysis, *Coprinus cinereus*, 529
Meiosis
defective recombination, isolation of mutants, yeast, 79
founding of aggregations, *Polysphondylium pallidum*, 563
Meiotic drive
causes of sex ratio bias, unisexual sterility, 841
independent distorting ability, *Enhancer of segregation distortion*, *Drosophila melanogaster*, 339
Meiotic recombination hotspot, on chromosome *III*, *Saccharomyces cerevisiae*, 717
5-Methylcytosine, spontaneous mutation at hotspot, *Escherichia coli*, 23
Migration, isolation by distance in a quantitative trait, 443
Mitochondria, comparative effects of pollen and seed migration, cytonuclear structure, plant populations, 639
Mitosis, recombination, *Schizosaccharomyces pombe* mutants, 495
Mouse
interspecific backcross, sex-specific differences, allelic inheritance, 813
recombinant inbred strains, three-locus linkage analysis, Bayes' theorem, 631
t complex, genetic exchange across paracentric inversion, 799
Mutagenesis, combinatorial, Tn*10* Tet repressor binding, *Escherichia coli*, 225
Mutagens, tester system for detecting each of six base-pair substitutions, essential cysteine, yeast, 59
Mutants
gal3, yeast galactose system, 233
genetic mosaic screen, essential zygotic genes, *Caenorhabditis elegans*, 281
null, glucose phosphorylation, yeast, 521
Schizosaccharomyces pombe, mitotic recombination, 495
tryptophan aporepressors, altered specificities, co-pressor recognition, 29
Mutations
frameshift, adaptive reversion, *Escherichia coli*, 695
genetic analysis of chromosome region 63, *Drosophila melanogaster*, 763
histone regulatory, suppression of δ insertion alleles, yeast, 729
isolation by distance in a quantitative trait, 443
120-kilobase mitochondrial chromosome, maize, 417
multiple functions of *let-23*, vulval induction, *Caenorhabditis elegans*, 251
nearly neutral, study of model, finite populations, 183
Posterior sex combs/Suppressor 2 of zeste, molecular genetics, *Drosophila melanogaster*, 119
spontaneous, 5-methylcytosine hotspot, *Escherichia coli*, 23
response to artificial selection, *Drosophila melanogaster*, 89
two independently derived *waxy* mutations, common deletion, maize, 425
Mutator element, *mariner*, molecular and functional analysis, *Mos1* in *Drosophila*, 311

Nucleotide, substitutions, *trans*-activation of *mariner*, *Drosophila*, 777
Nycticeius humeralis, 607

Oncogenes
multiple functions of *let-23*, vulval induction, *Caenorhabditis elegans*, 251
Xmrk, *P* locus placement, 655
Overdominance, two modes of balancing selection, *Drosophila melanogaster*, 381
Oyster, phosphoglucomutase-2 locus, expression of overdominance, 133

P element, transposons, *l(3)S12* locus, *Drosophila melanogaster*, 103
Pheromones, genetic control, *Ngbo*, *Drosophila simulans*, 293
Phosphoglucomutase-2, locus, expression of overdominance, oyster, 133
Plants, pollen and seed migration, cytonuclear structure, populations, 639
P locus, maize, *Ac*-induced homologous recombina-

tion, 163
Podospora anserina, cloning of mating types, haploid transformants, 539
Pollen, seed migration and, cytonuclear structure, populations, 639
Polymorphism
environmental induction of heritable changes, specific DNA alterations, flax, 619
genetic variance for body size, natural population, *Drosophila buzzatii*, 739
intergenic region between COI and COII, origin and function, honeybees, 393
Polyploids, chromosome differentiation and pairing behavior, *Secale*, 433
Polysphondylium pallidum, founding of aggregations, effect of genes, 563
Population
cytonuclear structure of plants, comparative effects, pollen and seed migration, 639
development of evolutionary genetics, electrophoresis, 657
finite, nearly neutral mutation model, 183
isolation by distance in a quantitative trait, 443
natural
genealogies and distribution of fixed differences, DNA sequence samples, 831
genetic variance for body size, *Drosophila buzzatii*, 739
Prohead, cold-sensitive accessory protein, second-site suppressors, bacteriophage ΦX174, 663
Proto-oncogenes, *Xmrk*, *P* locus placement, 655

Receptors
epidermal growth factor, multiple functions of *let-23*, *Caenorhabditis elegans*, 251
tyrosine kinase, *Xmrk*, *P* locus placement, 655
Recombination
Ac-induced homologous recombination, maize *P* locus, 163
early chorion multigene family, localized gene conversion, *Bombyx mori*, 595
genetic exchange across paracentric inversion, mouse *t* complex, 799
heteroduplex chain polarity, phage λ, 7
inbred mouse strains, three-locus linkage analysis, Bayes' theorem, 631
marker-dependent, T4 bacteriophage, 673
meiotic, isolation of mutants, yeast, 79
mitotic, *Schizosaccharomyces pombe* mutants, 495
Repressor, Tn*10* Tet, combinatorial mutagenesis, *Escherichia coli*, 225
Reproduction, three-locus modifier model, gametophytic self-incompatibility, 453
RNA, messenger, operator, mutational analysis, T4 DNA polymerase, 203

Saccharomyces cerevisiae, 59, 69, 79, 233, 241, 505, 521, 703, 717, 729
Schizosaccharomyces pombe, mutants, mitotic recombination, 495
Secale, chromosome differentiation and pairing behavior, polyploids, *Secale*, 433
Seed, migration, cytonuclear structure, populations, 639
Selection
artificial, new mutations, *Drosophila melanogaster*, 89
natural, overcompensation and overdominance, *Drosophila melanogaster*, 381
Self-incompatibility, gametophytic, three-locus modifier model, 453
Sex
evolution of transformation, DNA repair, *Bacillus subtilis*, 215
genetic control of pheromones, *Ngbo* locus, *Drosophila simulans*, 293
ratio bias, unisexual sterility in hybrids, Haldane's rule, 841
-specific differences, allelic inheritance, interspecific backcross mice, 813
Xmrk, *P* locus placement, 655
SOS control system, excision and transposition of Tn5, *Escherichia coli*, 45
Speciation, genetic basis, *Drosophila virilis* species group, 331
Suppressors
dominant and recessive, restoration of glucose transport, yeast *snf3* mutants, 505
genetic interactions at *FLA10* locus, *Chlamydomonas reinhardtii*, 549
gyrase A-like domain, DNA topoisomerase II, yeast, 703
second-site, cold-sensitive prohead accessory protein, bacteriophage ΦX174, 663
SUP1(SUP45) and *SUP2(SUP35)*, interaction, non-Mendelian factors in yeast, 513

t complex, mouse, genetic exchange across paracentric inversion, 799
Temperature, -sensitive mutants and combinatorial mutagenesis, Tn*10* Tet repressor binding to *tet* operator, *Escherichia coli*, 225
Tn5 element, excision and transposition, SOS activity, *Escherichia coli*, 45
Tomato, paste, concentrated review of genetic highlights, 1
Transposable elements, *Ac*, homologous recombination, maize *P* locus, 163
Transposeable element
mariner
evolution, *Drosophila* species, 319
introduction into germline, *Drosophila melanogaster*, 303
molecular and functional analysis, *Mos1* in *Drosophila*, 311, 319
trans-activation, *Drosophila*, 777
models of repression, P-M hybrid dysgenesis, P

cytotype, 471
quiescent *Uq*, spontaneous germinal activation, maize, 823
Transposition
excision and, Tn5, SOS activity in *Escherichia coli*, 45
promotion of adjacent deletions by IS*10*, low frequency, *Escherichia coli*, 37
Transposon
characterization of *prune* locus
IS*10*, genetic evidence against intramolecular rejoining, donor DNA molecule, 687
molecular structure of *TE146* and derivatives, *Drosophila melanogaster*, 357
P element, *l(3)S12* locus, *Drosophila melanogaster*, 103
Transvection, fragment of *engrailed* regulatory DNA, *white* gene, *Drosophila*, 751
Tryptophan, mutant aporepressors, altered specifications, copressor recognition, 29
Ty elements, transcription in yeast, *SNF2/SNF5/SNF6*, 69

Yeast
galactose system, mechanism of inducer formation, *gal3* mutants, 233
genetic analysis of gyrase A-like domain, DNA topoisomerase II, 703
isolation of mutants defective in early steps, meiotic recombination, 79
mitochondrial DNA, nuclear mutation reversing a biased transmission, 241
null mutants in glucose phosphorylation, metabolism, invertase expression, 521
omnipotent suppressors *SUP1(SUP45)* and *SUP2(SUP35)*, interaction, non-Mendelian factors, 513
snf3 mutant, restoration of glucose transport, dominant and recessive suppressors, 505
suppression of δ insertion alleles, histone regulatory mutations, 729
tester system for detecting each of six base-pair substitutions, essential cysteine, iso-1-cytochrome *c*, 59
Ty transcription, *SNF2/SNF5/SNF6* genes, 69

Zea mays, 163, 823
